Please amend the abstract of the disclosure that appears on page 10 of the application as follows:

-- ABSTRACT OF THE DISCLOSURE

The object is to provide a A pipe connecting structure which can prevent electrical charge of a plastic coated metal pipe using a simple structure. In order to accomplish this object, The structure includes beads 5a, 5b, 5c are provided to protrude protruding from the outer surface of the end of a plastic coated metal tube 3, which is obtained by coating the outside of a bare metal pipe 1 with a nonconductive plastic film 2, which is obtained by coating the outside of a bare metal pipe 1 with a nonconductive plastic film 2, which is obtained by coating the outside of a bare metal pipe 1 with a nonconductive plastic film 2, which is obtained by coating the endough of the bead 5a to expose the circumferential surface of the bare metal pipe 1, the exposed portion is made to contact the inner surface of a conductive tube 4, and thus connecting the plastic coated metal tube 3 and the conductive tube 4 are connected together.
